SUMMARY

Entry-level Data Analyst / Data Engineer with hands-on, project-based experience across the full data lifecycle: ingestion, cleaning, modeling, automation, and dashboarding for non-technical stakeholders. Google- and Microsoft-certified in Data Analytics and Power BI. Comfortable in SQL, Python, and Power BI, with applied exposure to ETL orchestration (Airflow, Prefect), containerization (Docker), and machine learning (XGBoost, Random Forest, NLP). Built and deployed three end-to-end data products from raw data to live, publicly accessible applications. Seeking to bring the same ownership to an entry-level Data Analyst or Data Engineer role.

TECHNICAL SKILLS

- **Languages & Querying:** Python, SQL, DAX, PostgreSQL, DuckDB, Apache Spark
- **Data Engineering:** Apache Airflow, Prefect, Docker, ETL Pipeline Design, Data Quality Checks, REST APIs
- **Analytics & Machine Learning:** Power BI, Excel, RFM Segmentation, XGBoost, Random Forest, FinBERT / NLP, Scikit-learn, A/B Testing, Statistical Analysis
- **Deployment & Tools:** Git/GitHub, Render, Hugging Face, Dimensional Modeling, Docker

PROJECTS & APPLIED EXPERIENCE

Retail Analytics & Customer Segmentation

2026

Python, PostgreSQL, SQL, RFM Segmentation, Power BI, DAX

- Built an end-to-end e-commerce analytics pipeline on the UCI Online Retail II dataset (1M+ transactions), cleaning and validating data in Python with fully documented data-quality decisions.
- Loaded cleaned data into PostgreSQL across 5 analytical views and ran RFM segmentation to split 5,861 customers into 8 behavioral segments, directly informing targeted marketing strategy.
- Shipped a 5-page Power BI dashboard with custom DAX measures covering revenue trends, geography, product performance, and customer behavior for non-technical stakeholders.

[Live Dashboard](#) | [Source Code](#)

IPL Analytics Platform (2008–2026)

2026

Python, XGBoost, Random Forest, Feature Engineering

- Engineered an end-to-end analytics platform spanning all 19 IPL seasons, with an automated Cricsheet ingestion pipeline that keeps the dataset current through every completed season.
- Engineered 29 cricket-intelligent features and trained XGBoost and Random Forest models for win-probability prediction and auction-value estimation.
- Deployed and continuously maintained both models on Render, exposing a live, self-refreshing analytics application to end users.

Stock Sentiment Engine

2026

FinBERT/NLP, Prefect, DuckDB, NSE Market Data

- Built an end-to-end pipeline that scores Indian financial news with FinBERT and tests whether sentiment predicts next-day NSE stock movement.
- Orchestrated daily automated news ingestion with Prefect and ran lag-correlation analysis powered by DuckDB.
- Designed the system to run lean by default, with zero Docker containers and zero paid cloud infrastructure — demonstrating cost-conscious engineering judgment.

CERTIFICATIONS

- **Google Data Analytics Professional Certificate** — Google / Coursera, Issued May 2026 (ID: 06Y002MRVVP2) [Credential](#)
- **Microsoft Power BI Data Analyst Professional Certificate** — Microsoft / Coursera, Issued July 2026 [Credential](#)
- **IBM AI / ML Specialization** — IBM / JECRC University, Issued July 2025 [Credential](#)

EDUCATION

Master of Computer Applications in AI and Data Science

2025 – 2027

Manipal University

Bachelor of Computer Applications — AI/ML Specialization (IBM Collaboration), CGPA 8.07

2022 – 2025

JECRC University
